

```
python project - q2.py

class cal2():
    def setdata(self):
        self.radius=int(input("Enter a radius :"))

    def area(self):
        PI=3.142
        self.ans = PI*(self.radius*self.radius)

    def display(self):
        print(" area of circle is :",self.ans)

c=cal2()
c.setdata()
c.area()
c.display()
```

Run: q2 x

"D:\python project\Scripts\python.exe" "D:/python proje

Enter a radius :7

area of circle is : 153.958

Process finished with exit code 0
